surveillance tech:
facial recognition
what is *it*? And how does it *work*?

what is the meaning
of surveillance?

face detection Verify Identify Video

Information	ISO Standart
Similar faces	ISO Best Practice
Id:	1458918 ▲
Age:	39

face recognition or
detection systems
that you see
everyday

face detection vs face
recognition:

face detection is the use of
computer technology to
identify the existence of a
human face in an image or
video

how does face recognition work?:

1. find a face in an image
2. strikes a pose & project images
3. the computer measures the face
4. Compares the face with other faces with similar measurements

OpenCV Dazzle

Aug 22, 2017

An open source face detection toolkit is being developed to evaluate looks using haar, dlib, ssd, and yolo face detectors.

In the meantime, everything here is designed for the OpenCV haarcascade face detection algorithm.

break time!

personal digital safety

how do i start?

step 1:
where's *my* stuff?

create your information map!

- Where is my information?
- What kind of personal information do I share on a daily basis?
- What kind of personal information do I rarely interact with?

step 2:
what information do i
value and how could
it be at risk?

outline some personal scenarios!

- How could my information be intercepted, compromised, corrupted, falsified, lost, etc?
- Who or what could be a threat against my information?

step 3:
how do i protect my
information better?

create your action plan!

- What are behavior changes I can make?
- What are potential tradeoffs?
- What tools exist to help me?
- Who can support me?
- What is my strategy to stay on top of it?

Try it out!
